

Yu Shao Pang

Platform Engineer

Kubernetes • GitOps • CI/CD • AWS

Singapore | (+65) 8310 8770 | p.yushao2@gmail.com | linkedin.com/in/yushaopang

Profile

Platform engineer with 5+ years building and operating developer platforms across financial services and government. Experience spans Kubernetes self-service delivery, GitLab platform modernisation, CI/CD and Terraform tooling, and production reliability; currently the sole APAC engineer for a 12-cluster EKS estate across three AWS accounts and regions.

Experience

Capula Investment Management

DevOps Engineer (Platform Engineering)

Singapore
May 2026 – Present

- Shipped a versioned Argo CD and Helm cluster-services platform that replaced per-cluster copied manifests, removed 136 duplicate files and reduced new-cluster onboarding to one declarative configuration entry.
- Prototyped GitOps pull-request diffs in Bash, then redesigned the workflow as a Go tool adopted across 18 repositories in three projects, catching configuration defects before merge.
- Modernised build infrastructure by upgrading two production Jenkins controllers across four controlled waves, validating 159 plugins, and proving ephemeral TeamCity agents on EKS against a 33,000-test workload.
- Restored observability across 12 EKS clusters by repairing 11 faulty Kubernetes alerts and introducing CI/CD dashboards-as-code; diagnosed and resolved a fleet-wide ingress admission failure within 101 minutes.
- Built and shipped kubect1-login, a dependency-free Go plugin that consolidated AWS SSO and EKS configuration into one command and was promoted from a personal prototype into the team-supported toolchain.

Squarepoint Capital

Systems Specialist – Schedulers & Orchestrators

Singapore
Mar. 2025 – May 2026

- Owned and evolved an Argo CD-based Kubernetes self-service delivery platform, improving day-2 operations and leading application migrations from legacy clusters to the newer platform.
- Diagnosed performance and reliability bottlenecks in etcd and Kyverno, and supported critical services through on-call incident response, root-cause analysis, runbooks and durable remediation.

Systems Specialist – Developer Platforms

Feb. 2023 – Mar. 2025

- Led the migration of a business-critical on-premises GitLab platform from CentOS 7 and Chef to Rocky Linux 9 and Ansible, planning a low-risk production cutover.
- Extended the open-source GitLab Ansible collection for on-premises requirements and contributed missing functionality and fixes upstream.
- Built custom Terraform providers in Go for internal REST APIs and managed shared platform infrastructure across AWS and GCP.
- Developed and maintained Prometheus alerts and Grafana dashboards for critical services, supporting production troubleshooting and operational readiness.

Software Developer (DevOps)

Aug. 2022 – Feb. 2023

- Built and maintained reusable GitLab CI and Bamboo libraries and templates, alongside a Python server-side Git hook dispatcher for hosted GitLab.
- Led a cross-repository Terraform refactoring effort to reduce duplication and maintenance overhead, and created reusable compliant modules enforcing cloud-security requirements.

GovTech Singapore

Associate DevOps Engineer

Singapore
Jun. 2021 – Aug. 2022

- Provisioned and operated AWS infrastructure with Terraform and Terragrunt, and automated application delivery and operational workflows using GitHub Actions, Codefresh, Python and Bash.

Technical Skills

Cloud & Containers

AWS, GCP, Kubernetes/EKS, Docker, Helm

Platform & Delivery

Argo CD, Jenkins, TeamCity, GitLab CI, GitHub Actions, Bamboo

IaC & Automation

Terraform, Terragrunt, Ansible, Go, Python, Bash

Reliability & Observability

Linux, Prometheus, Cortex, Grafana, incident response

Security & Identity

AWS IAM, OIDC, Keycloak

Education

Nanyang Technological University

B.Eng. in Computer Science – Highest Distinction (GPA: 4.76/5.00)

Singapore

2017 – 2021
